

StackBuilder is a software for packaging palletization and packing optimisation.

StackBuilder is software to design and optimize the packing (Articles / case), palletizing (box / pallet) and shipping items (pallets / truck).

It is a simple software to learn, allowing you to move forward with a global vision of the supply chain of your packaging. StackBuilder has many features to meet your needs:

- Case Palletization
- Packing optimisation Article/Box
- Calculate the optimal packaging system: article/box/pallet
- Search for the optimal packing solutions in your Database of boxes solutions
- Cylinders palletization
- Bundles palletization
- Add interlayers, corners, film,cap
- Databases of boxes solutions
- Filing truck
- Analysis reports
- BCT calculation

With PLMPack platform StackBuilder fully integrates the Picador software for packaging design, packaging, display, POS ...
