printing

- +-150cm
- +-150gsm
- 100% Polyester

40 °C wash. Don't bleach. Low heat iron. Use mild detergents. Can be tumble dried.

Prolite fabric is a material known for its distinctive triangular-shaped fibers that create a subtle sheen and luxurious appearance. This fabric offers a smooth, silky hand feel with excellent drape and durability. The unique Prolite fiber structure reflects light beautifully, giving the fabric an elegant luster that resists fading over time. Prolite fabric is commonly used for sportswear, activewear, and athletic jerseys due to its moisture-wicking properties and quick-drying capabilities. It's also popular for linings in jackets and coats, flags and banners, home décor items like curtains and cushion covers, and lightweight outerwear.

The fabric's wrinkle-resistant nature and easy-care qualities make it a practical choice for both commercial and personal sewing projects.
