

# ROLL - TO - ROLL TRANSFER ROTARY HEAT PRESS

TTM - 1732

## Features

- Automatic blanket alignment
- Oil drum surface temperature display
- Accurate transfer speed display
- Motor controlled blanket tension
- A minimum blanket coverage of 60%
- Small Working Table

# Eastsign

## SPECIFICATIONS

| <i>Element</i>            | <i>Description</i>                              |
|---------------------------|-------------------------------------------------|
| Transfer Speed            | 1.5 - 2m/min                                    |
| Transfer Width            | 1700mm (70")                                    |
| Felt Width                | 1800mm (71")                                    |
| Max Temperature           | 230°C (446°F)                                   |
| Drum Diameter             | 320mm (12.6")                                   |
| No. of heating elements   | 9                                               |
| Heating Power             | 16kW                                            |
| Heating Media             | Oil                                             |
| Process Path              | Feed in through top drum                        |
| Roll to Roll Function     | Yes                                             |
| Sheet to Sheet Function   | Yes                                             |
| No. of Feeding Rollers    | 3                                               |
| No. of Collecting Rollers | 3                                               |
| Air Pressure Included     | Yes                                             |
| Voltage                   | 3 phase, 380V                                   |
| Dimensions                | 2590mm x 1330mm x 1660mm<br>( 102" x 52" x 65") |
| Net Weight                | 1700kg                                          |
| Net Weight                | 1850kg                                          |
